· Learning Content Creation Journey: Early User flow

0. Create Knowledge Base

Tyler and other APS SMEs can collect and upload relevant content into the content library. (e.g. documents, blogs, podcasts and websites). This material will be used as input in developing the course.

He can **upload relevant content** through an intuitive interface.

1. Create Learning Content

Tyler is able to use the knowledge base, or a sub-set of the knowledge base to create the learning course. He determines the desired **proficiency level** of the course and **generates the course objectives**.

Based on his selected course design pattern, Tyler can generate a course that fits the desired structure, proficiency level and learning objectives Tyler can generate, review and enhance learning content, and generate other types of complementary material, if required (eg. Quizzes, speeches and team discussion points)

2. Review / Approve Learning Content

Tyler refines and revises the content.

Once finalised, Tyler generates a **content factsheet** that explains how the content was generated (e.g. source material, trustworthiness).

He also attaches a **checklist** that assesses the course against required standards.

He then sends the course, factsheet, and checklist to Anna and other required stakeholders/SMEs for approval.

3. Deliver Learning Content

Tyler exports the approved course in a format suitable for the Learning Management System.

SMEs

Any SME involved in the process will be able to spend more time focusing on higher value tasks due to the ease in content generation and Al-guided review mechanisms

Approval groups

All other SMEs' and stakeholders' involvement during approval may be fast-tracked as they are able to quickly review the course by accessing the checklist & factsheet.

Anna receives the approval **factsheet and checklist** and is able to review and evaluate the course. Anna approves the training content

Anna rejects the training content and provides feedback based on the factsheet, checklist, and her own expertise.
